

VETERINARY LETTER

To whom it may concern

Regarding cattle herd belonging to:

As Veterinary surgeon to:

This is to certify that the herd as detailed above is currently up to date with tuberculosis and brucellosis testing with negative results. In addition, to the best of my knowledge, there have been no clinical signs of IBR/infectious pustular vulvovaginitis or BVD, reported in the herd, during the past 12 months and no clinical signs of EBL reported within the last 3 years.
